

SSB 2010 COMMS Bracket Instructions

View 1 shows the 2010 Comms Bracket mounted under the tank band ready to mount the comms box.

View 2 shows the 2010 Comms Bracket with the comms box mounted (side view).

View 3 shows the comms box mounted (top view).

Your tank band may differ from the one shown, or you may have two tank bands. With the double tank band configuration, the top band is used to secure the bracket to the tank. On certain buoyancy compensators it is possible to rotate the tank band. If this is possible, it usually is better to position the band tightening cam away from the bracket. If you encounter any problems, please give us a call.
